

## TECHNICAL COURSES

TRACS International Training Ltd. has a vast database of learning and development material. Whilst most training events are tailored to meet client specifications it is convenient to organise our material using a conventional course framework.

The following “list of courses” should be viewed as a capability statement and forms a basis for learning and development discussions.

The courses include:

**Introduction to the E&P Business (including graduate induction events)**

**Petroleum Economics**

**Risk Analysis**

**E&P Portfolio Management**

**Prospect and Development Engineering (offshore and land versions)**

**Drilling Fluid Technology and Management**

**Well Productivity Awareness (both drilling and workover versions)**

**Completion design and installation**

**Tubing stress analysis**

**Exploration and Production for Technical Support Staff**

**Geophysics**

**Production Geology**

**Petrophysics**

**Reservoir Engineering**

**Integrated Reservoir Characterisation**

**Field Based Training for Asset Teams**

**Competency based Self Learning Modules which include:**

**Open Hole Logging      Well Testing**

**Coring                      Production Logging**

**Geosteering                Logging Through Casing**
